

NEW HORIZONS IN ENVIRONMENTAL POLITICS SERIES

NEW SERIES!

Series Editor, **Arthur P.J. Mol**, Professor in Environmental Policy, University of Wageningen, The Netherlands

The environment has been on local, national and global public and political agendas since the late 1960s, yet the profile, frontier, geographies and politics of environmental disruption and reform are constantly changing as our natural environment continues to be threatened. New actor networks, topics, movements, conflicts, reform agendas, alliances and governance regimes continue to emerge in developed, emerging and developing economies alike. How can we understand these changes in the politics of nature, environment and natural resources; how is the environment (re)defined, debated and protected; what differences do we see between countries and regions in environmental politics; how do actors (not) collaborate around environment and natural resource conflicts; who wins, who loses - and in what ways; and how can we better study, analyze and theorise such developments and outcomes?

The New Horizons in Environmental Politics Series provides a platform for in-depth critical assessments of these vital questions, and is an invaluable forum for original research across the spectrum of environmental politics. The series is designed to promote innovative cross-disciplinary analysis of the contemporary issues and debates influencing the various dimensions of environmental politics. Covering a diverse range of topics, the series will examine the political, economic and ethical aspects of environmental policy, governance and regulation. This series brings together cutting edge research on environmental politics worldwide, aiming to shed light on, better understand and explain current trends and developments.

With oversight from the Series Editor, Professor Arthur Mol, a noted specialist in the field of environmental politics at Wageningen University, the Netherlands, the *New Horizons in Environmental Politics Series* will comprise carefully commissioned projects from experts in the field including both academics and professionals. The audience for the series is global, and books in the series will be essential reading for students, academics and practitioners: in short, anyone with an interest in understanding the vital issues affecting environmental politics in the 21st Century.

Proposals for single-author monographs, co-authored and edited volumes focusing on relevant topics will be accepted for consideration, and the estimated word lengths for individual projects should be in the region of c.70,000-110,000 words.
